

Semi Translucent Opalescent

Semi-Translucent Opalescent mixes are primarily opal glass, eliminating the perception of images through the sheet. Because of their relative opacity, these glasses are highly reflective in nature. With backlighting, natural or artificial, they reveal a captivating, luminescent glow.

305S and I/305S

We've taken great care to present our glass as true-to-life as possible. Since computer monitors and printers vary widely, and may not reliably portray the glass or its color, please use this sheet as a reference tool only. You may want to consider purchasing a glass Sample Set for selecting just the right glass for your projects.
