The translucent Opal mixes are about 50-50 cathedral color and white opal glass. The larger proportion of opaque white reduces light transmission and increases surface reflection. Some translucents involve multiple cathedral colors with white, and others use colored opals to achieve their individual character.
We've taken great care to present our glass as true-to-life as possible. Since computer monitors and printers vary widely, and may not reliably portray the glass or its color, please use this sheet as a reference tool only. You may want to consider purchasing a glass Sample Set for selecting just the right glass for your projects.
